EDUCATION

A. P. Shah Institute of Technology

Bachelor of Engineering in Computer Engineering — CGPA: 8.4/10.0

Mumbai, India

Aug 2023 – May 2027

EXPERIENCE

AI Code Evaluator and Prompt Engineering Intern

Sep 2025 – Dec 2025

NextWealth AI

Remote

- Engineered production AI asset platform processing 100+ concurrent uploads using FastAPI, Celery, Redis, and Docker, reducing processing latency by 40%
- Designed multi-agent AI pipeline with prompt engineering workflows achieving 95% consistency; integrated LLM APIs for automated content generation
- Conducted AI safety evaluations including prompt injection testing and adversarial validation for enterprise deployment
- Mastered advanced DSA covering graphs, DP, greedy algorithms, and bit manipulation with production-ready Java/Python code

PROJECTS

AirWatch Pro - ML-Powered Air Quality System | *Machine Learning, FastAPI, React, PostgreSQL* [GitHub](#)

- Built production ML pipeline using multiple machine learning algorithms with hyperparameter tuning achieving 90%+ R^2 score for 48-hour AQI predictions across 6 industrial stations processing 1.68M+ sensor readings
- Architected advanced feature engineering with lag features, cyclical temporal encoding, rolling targets; implemented CPCB-compliant AQI calculations with multi-pollutant sub-index methodology
- Deployed real-time monitoring system with FastAPI, PostgreSQL, JWT authentication serving predictions via RESTful APIs with sub-200ms response times

MoneyOps - Event-Driven Financial Platform | *Spring Boot, Kafka, PostgreSQL, LangChain* [GitHub](#)

- Architected a production-grade financial ledger using Spring Boot and Kafka, enforcing immutable transaction records and ACID-compliant persistence with PostgreSQL
- Built high-throughput REST APIs with JPA/Hibernate; optimized queries and indexing to achieve sub-100ms response times
- Designed deterministic AI orchestration using LangChain multi-agent workflows with strict JSON schemas
- Containerized services using Docker and implemented automated testing with JUnit and Mockito

APSIT-In - Campus Social Network | *MERN Stack, Socket.IO, JWT, Cloudinary* [Live](#) | [GitHub](#)

- Built a full-stack social platform with real-time messaging, role-based authentication, events, and feeds
- Optimized backend APIs with aggregation pipelines and caching strategies achieving 94% GTMetrix score
- Implemented secure media handling with Cloudinary including image compression, lazy loading, and role-based upload permissions to reduce bandwidth usage and improve load performance
- Designed scalable backend architecture with modular controllers, services, and middleware enabling easy feature expansion and clean code maintainability

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C++, SQL

Backend & Microservices: Spring Boot, JPA/Hibernate, FastAPI, Node.js, REST APIs, Kafka, RabbitMQ, Celery

Databases: MySQL, PostgreSQL, MongoDB, Redis, Query Optimization, Indexing

AI/ML: Machine Learning Algorithms, LangChain, Multi-Agent Systems, Prompt Engineering, LLM APIs, scikit-learn

DevOps & Tools: Docker, Git, Maven, JUnit, Postman

ACHIEVEMENTS

Competitive Programming: 300+ LeetCode problems — Rating 1778 — Top 8.4% globally — 100-Day Streak 2025

Leadership: Joint Development Head, Coders Club APSIT — Technical Co-Head, DevOps Club APSIT

Hackathons: Winner – CODE-A-THON 2.0 (DMCE, Navi Mumbai)
